

Project Name : Horton Heath, Eastleigh

Job No : 19-367

Note Title : Flood Risk Assessment and Drainage Strategy - Addendum 1

Author : JW

Checked : JH

Approved : GG

Date : May 2021

1.0 INTRODUCTION

1.1 *Background*

1.1.1 Odyssey was commissioned by Eastleigh Borough Council (EBC) to undertake a Flood Risk Assessment (FRA) and Water Management Strategy to be submitted in association with a planning application in support of a proposed development for a site at Horton Heath, Eastleigh.

1.1.2 The wider One Horton Heath development has obtained planning permission via two separate applications. The new composite outline planning permission for the wider site would increase the number of proposed dwellings from circa 1,500 to 2,500. The FRA and Water Management Strategy relates to the First Residential Parcel (FRP) of the development for 393 of the 2,500 dwellings.

1.1.3 The FRA and Water Management Strategy were submitted to EBC as part of the full planning application (reference F/20/89500) for the proposed FRP development.

1.1.4 Following the submission of the application, comments were received from Hampshire County Council (HCC) in their capacity as the Lead Local Flood Authority (LLFA), in February 2021 (HCC reference: SWM/2021/0019). A copy of the LLFA consultation comments is provided in **Appendix A**.

1.1.5 This FRA Addendum, which should be read in conjunction with the submitted FRA and Water Management Strategy (reference 19-367-01B), provides additional information as requested by the LLFA.

2.0 RESPONSE TO HAMPSHIRE COUNTY COUNCIL COMMENTS

2.1.1 HCC provided the following comments (*in bold italics*) in February 2021. Odyssey's response directly follows each comment.

“The drainage plan shows a series of outfalls into the existing ditch. However, the fall of the ditch is erratic with some sections backfalling and there being a relatively shallow depth throughout. No levels have been provided at the headwalls so it is not clear what the final outfall levels will be nor is there any information about the typical water level within the ditch. This should be provided to ensure that the outfalls will be functional and water will flow appropriately within the ditch.”

2.1.2 It is proposed to discharge Basin I, Basin K and Basin L directly into the existing ditch.

2.1.3 The pipework from Basin I has been designed to outfall at an approximate invert level of 19.88 metres above ordnance datum (m AOD). The bed level of the ditch in the location of the proposed outfall is 19.58. The proposed pipe would outfall at 300mm above the invert level of the ditch.

2.1.4 The pipework from Basin K has been designed to outfall at an approximate invert level of 18.05m AOD. The bed level of the ditch in the location of the proposed outfall is 17.90m AOD. The proposed pipe would outfall 150mm above the invert of the ditch.

2.1.5 The pipework from Basin L has been designed to outfall at an approximate invert level of 17.00m AOD. The bed level of the ditch in the location of the proposed outfall is 16.60m AOD. The proposed pipe would outfall at 400mm above the invert of the ditch.

2.1.6 The typical water level within the ditch is currently unknown.

“If water levels in the ditch rise, it is not clear what the impact will be on the drainage system so if modelling is not available, the drainage should be modelled using a surcharged outfall to understand the potential flood risk.”

2.1.7 The drainage networks have been modelled using a submerged outfall for the 1 in 100 year storm with 40% allowance for climate change. The results are presented in **Appendix B**. The results show that even with a submerged outfall, none of the proposed drainage networks would flood.

“Permeable paving is proposed within the parking areas. Please confirm whether these are lined given that parts of the site could suffer with high groundwater.”

2.1.8 All proposed permeable paving would be lined.

“A series of what we believe to be swales are identified adjacent to the watercourse and in various locations around the development. These do not appear to be connected and there is a section that appears to go through basin I. There are also sections that appear to clash with the proposed access roads between the dwellings and the ponds. Please clarify these elements particularly as there appears to be an existing ditch in this location which would require ordinary watercourse consent if any alterations are proposed.”

2.1.9 The proposed swales are shown in blue on the drainage strategy. The basin and access roads are shown over existing hedges, which would be removed. The updated drawing is presented in **Appendix C**.

2.1.10 The proposed swales to the south-west of the site would drain into the main drainage system. The two enhanced swales on the north side of the site would be incorporated into the pipework; directing water through the enhanced swales would provide additional treatment. The outfall into Basin K has also been moved to better accommodate the swales. The storage volume that would be provided by the proposed swales has not been included in the hydraulic model as a conservative approach.

“Detailed hydraulic calculations have been provided but these do not appear to include the results summary pages. Please can this be provided.”

2.1.11 Updated hydraulic calculations including the results summary pages are presented in **Appendix B**.

“It is stated that a maintenance company will be responsible for the drainage assets. Please note that our response is separate from Highways and if the roads are to be adopted, maintenance responsibilities will need to be discussed with the Highways team.”

2.1.12 All proposed adoptable highway drains and adoptable surface water sewers would be maintained by HCC Highways and Southern Water respectively. The remaining private drainage would be maintained by the appointed maintenance company.

“Not with standing the above comments, we would request a condition to ensure clarity on who will be responsible for the drainage maintenance responsibility with a clear plan detailing this as well as confirmation that the relevant bodies will adopt the relevant features”

2.1.13 A condition of this nature would be accepted.

APPENDIX A

Direct Line	0370 779 7497	Your reference	F/20/89500
Date	5 February 2021	Email	SWM.consultee@hants.gov.uk

Dear Sir/Madam,

Erection of 393 residential units with public open space, hard and soft landscape works, internal roads, footway/cycleways, associated parking spaces, substation, SuDS and associated infrastructure (This application is subject to Environmental Impact Assessment). at Land west of Burnetts Lane, Eastleigh, SO30 2HH

Hampshire County Council as Lead Local Flood Authority has provided comments in relation to the above application in our role as statutory consultee on surface water drainage for major developments.

In order to assist applicants in providing the correct information to their Local Planning Authority for planning permission, Hampshire County Council has set out the information it requires to provide a substantive response at <https://www.hants.gov.uk/landplanningandenvironment/environment/flooding/planning>

The County Council has reviewed the following documents relating to the above application:

- Flood Risk Assessment and Water Management Strategy rev B
- PFA Flood Risk Assessment Issue 1 dated December 2020
- Phase 1 – Ground Investigation Desk Study Assessment ref S2 P01
- Phase 2 – Ground Investigation Report ref: S2 P1

In order for us to provide a substantive response, the following information is required:

The drainage plan shows a series of outfalls into the existing ditch. However, the fall of the ditch is erratic with some sections backfalling and there being a relatively shallow depth throughout. No levels have been provided at the

*Director of Economy, Transport and Environment
Stuart Jarvis BSc DipTP FCIHT MRTPI*

headwalls so it is not clear what the final outfall levels will be nor is there any information about the typical water level within the ditch. This should be provided to ensure that the outfalls will be functional and water will flow appropriately within the ditch.

If water levels in the ditch rise, it is not clear what the impact will be on the drainage system so if modelling is not available, the drainage should be modelled using a surcharged outfall to understand the potential flood risk.

Permeable paving is proposed within the parking areas. Please confirm whether these are lined given that parts of the site could suffer with high groundwater.

A series of what we believe to be swales are identified adjacent to the watercourse and in various locations around the development. These do not appear to be connected and there is a section that appears to go through basin I. There are also sections that appear to clash with the proposed access roads between the dwellings and the ponds. Please clarify these elements particularly as there appears to be an existing ditch in this location which would require ordinary watercourse consent if any alterations are proposed.

Detailed hydraulic calculations have been provided but these do not appear to include the results summary pages. Please can this be provided.

It is stated that a maintenance company will be responsible for the drainage assets. Please note that our response is separate from Highways and if the roads are to be adopted, maintenance responsibilities will need to be discussed with the Highways team.

Notwithstanding the above points, we would request a condition to ensure clarity on who will be responsible for the drainage maintenance responsibilities with a clear plan detailing this as well as confirmation that the relevant bodies will adopt the relevant features.

As a statutory consultee, the County Council has a duty to respond to consultations within **21 days**. The 21 day period will not begin until we have received sufficient information to enable us to provide a meaningful response.

Please ensure all data is sent to us via the relevant Local Planning Authority.

For guidance on providing the correct information, we recommend you use our **Surface Water Management Pre-application service** which provides clear guidance on what is required for us to recommend that planning permission is granted and consider the works as best practise. For full details, please visit: <https://www.hants.gov.uk/landplanningandenvironment/environment/flooding/planning> and click on [pre-application advice request form](#).

This response has been provided using the best knowledge and information submitted as part of the planning application at the time of responding and is reliant on the accuracy of that information.

Yours faithfully,

Flood and Water Management Team
Economy, Transport & Environment Department,
Hampshire County Council, 1st Floor, Ell Court West,
The Castle, Winchester, Hampshire SO23 8UD

Web:

<https://www.hants.gov.uk/landplanningandenvironment/environment/flooding>

General guidance for the application

It is important to ensure that the long-term maintenance and responsibility for Sustainable Drainage Systems is agreed between the Local Planning Authority and the applicant before planning permission is granted. This should involve discussions with those adopting and/or maintaining the proposed systems, which could include the Highway Authority, Planning Authority, Parish Councils, Water Companies and private management companies.

For SuDS systems to be adopted by Hampshire Highways it is recommended that you visit the website at:

<https://www.hants.gov.uk/transport/developers/constructionstandards> for guidance on which drainage features would be suitable for adoption.

Where the proposals are connecting to an existing drainage system it is likely that the authorities responsible for maintaining those systems will have their own design requirements. These requirements will need to be reviewed and agreed as part of any surface water drainage scheme.

Works in relation to ordinary watercourses

PLEASE NOTE: *If the proposals include works to an ordinary watercourse, under the Land Drainage Act 1991, as amended by the Flood and Water Management Act 2010, prior consent from the Lead Local Flood Authority is required. **This consent is required as a separate permission to planning.***

Information on ordinary watercourse consenting can be found at the following link

<https://www.hants.gov.uk/landplanningandenvironment/environment/flooding/c/hangewatercourse>

It is strongly recommended that this information is reviewed before Land Drainage consent application is made.

*For guidance on providing the correct information, we recommend you use our **Ordinary Watercourse Consents Pre-application service** and help avoid delays occurring at the formal application stage. A Pre-application service for Ordinary Watercourse Consents is available, allowing consents to go through in a smoother, often more timely manner. For full information please visit:*

<https://www.hants.gov.uk/landplanningandenvironment/environment/flooding/c/hangewatercourse>

Online Controls for Storm

Hydro-Brake® Optimum Manhole: SHBRAKE PP1, DS/PN: S1.001, Volume (m³): 1.7

Unit Reference MD-SHE-0068-2000-0936-2000
Design Head (m) 0.936
Design Flow (l/s) 2.0
Flush-Flo™ Calculated
Objective Minimise upstream storage
Application Surface
Sump Available Yes
Diameter (mm) 68
Invert Level (m) 26.005
Minimum Outlet Pipe Diameter (mm) 100
Suggested Manhole Diameter (mm) 1200

Control Points	Head (m)	Flow (l/s)
Design Point (Calculated)	0.936	2.0
Flush-Flo™	0.287	2.0
Kick-Flo®	0.586	1.6
Mean Flow over Head Range	-	1.8

The hydrological calculations have been based on the Head/Discharge relationship for the Hydro-Brake® Optimum as specified. Should another type of control device other than a Hydro-Brake Optimum® be utilised then these storage routing calculations will be invalidated

Online Controls for Storm

Hydro-Brake® Optimum Manhole: SHBRAKE PP4, DS/PN: S15.001, Volume (m³): 1.2

Unit Reference	MD-SHE-0061-1500-0750-1500
Design Head (m)	0.750
Design Flow (l/s)	1.5
Flush-Flo™	Calculated
Objective	Minimise upstream storage
Application	Surface
Sump Available	Yes
Diameter (mm)	61
Invert Level (m)	20.250
Minimum Outlet Pipe Diameter (mm)	75
Suggested Manhole Diameter (mm)	1200

Control Points	Head (m)	Flow (l/s)
Design Point (Calculated)	0.750	1.5
Flush-Flo™	0.231	1.5
Kick-Flo®	0.479	1.2
Mean Flow over Head Range	-	1.3

The hydrological calculations have been based on the Head/Discharge relationship for the Hydro-Brake® Optimum as specified. Should another type of control device other than a Hydro-Brake Optimum® be utilised then these storage routing calculations will be invalidated

Depth (m)	Flow (l/s)	Depth (m)	Flow (l/s)	Depth (m)	Flow (l/s)	Depth (m)	Flow (l/s)

Online Controls for Storm

Hydro-Brake® Optimum Manhole: SHBRAKE PP5, DS/PN: S21.001, Volume (m³): 1.6

Unit Reference MD-SHE-0087-3500-1104-3500
Design Head (m) 1.104
Design Flow (l/s) 3.5
Flush-Flo™ Calculated
Objective Minimise upstream storage
Application Surface
Sump Available Yes
Diameter (mm) 87
Invert Level (m) 23.150
Minimum Outlet Pipe Diameter (mm) 100
Suggested Manhole Diameter (mm) 1200

Control Points	Head (m)	Flow (l/s)
Design Point (Calculated)	1.104	3.5
Flush-Flo™	0.334	3.5
Kick-Flo®	0.689	2.8
Mean Flow over Head Range	-	3.1

The hydrological calculations have been based on the Head/Discharge relationship for the Hydro-Brake® Optimum as specified. Should another type of control device other than a Hydro-Brake Optimum® be utilised then these storage routing calculations will be invalidated

Depth (m)	Flow (l/s)	Depth (m)	Flow (l/s)	Depth (m)	Flow (l/s)	Depth (m)	Flow (l/s)
0.100	2.7	1.200	3.6	3.000	5.6	7.000	8.3

Kick-Flo®	0.852	34.3																																																																								
Mean Flow over Head Range	-	32.8																																																																								
The hydrological calculations have been based on the Head/Discharge relationship for the Hydro-Brake® Optimum as specified. Should another type of control device other than a Hydro-Brake Optimum® be utilised then these storage routing calculations will be invalidated

APPENDIX C

Water Management Strategy

- NOTES**
1. DO NOT SCALE FROM THIS DRAWING. WORK FROM FIGURED DIMENSIONS ONLY.
 2. ALL DIMENSIONS SHOWN ON THIS DRAWING ARE IN METRES.
 3. CULVERTED DITCH LEVELS HAVE BEEN INTERPOLATED FROM SURVEY UNDERTAKEN BY LIGHTSOURCE SURVEYS LTD IN APRIL 2018.
 4. PROPOSALS ARE INDICATIVE ONLY TO DEMONSTRATE DRAINAGE STRATEGY AND ARE SUBJECT TO EVOLVE THROUGH DETAILED DESIGN.
 5. THE LEVELS SHOWN ON THIS DRAWING ARE PRELIMINARY AND SUBJECT TO CHANGE.
 6. LIGHTING DESIGN IS INDICATIVE AND SUBJECT TO CHANGE AT DETAILED DESIGN.
 7. IN COMPLIANCE WITH CDM REGULATIONS 2015, ODYSSEY HAS FOLLOWED ITS DESIGN RISK MANAGEMENT PROCESS FOR HAZARD ELIMINATION AND RISK REDUCTION IN DEVELOPING THE ODYSSEY DESIGNS SHOWN ON THIS DRAWING.
 8. ABNORMAL OR UNUSUAL RESIDUAL RISKS MAY BE INDICATED BY USE OF HEALTH AND SAFETY SYMBOLS WHERE IT IS CONSIDERED THAT SUCH RISK MAY NOT NORMALLY BE EXPECTED BY COMPETENT PERSONS OR CONTRACTORS WITH NECESSARY SKILLS, KNOWLEDGE AND EXPERIENCE TO BE ENGAGED ON WORK OF THIS NATURE OR TYPE.
