

Details of landscaping, biodiversity mitigation and enhancement.

Bat Box

A bat box has been attached to the back of the garage as suggested. Please see picture below. Cabin before being stained can be seen.

Encouraging birds into the garden.

We have addressed this point by placing three bird nests to different trees throughout the garden. Please see attached pictures. We have also placed bird feeders in the middle of the garden and have started to attract robins, finches, tits and woodpeckers to the garden.

We were asked to stain the cabin darker to replicate the original look of the stable block. Below are pictures of the stain we used (dark brown) and the end result. You can see the original stable in the background in picture 3.

Picture 1 the wood protective treatment dark brown was used.

Picture 2 and 3 shows the two sides of the annex.

Encouraging wildlife

Encouraging birds into the garden.

We have addressed this point by placing three bird nests to different trees throughout the garden. Please see attached pictures. We have also placed bird feeders in the middle of the garden and have started to attract robins, finches, tits and woodpeckers to the garden

Hedge and shrubs.

A yew hedge is being planted along the fence line. Here is a picture of the new yew hedge after being planted.
