

PROTECTION OF PUBLIC SEWER

A public sewer crosses the South West corner of the site, as shown in black below and as you'll see from the extract of the tree protection plan, the extent of protective fencing, shown as a red line, encompasses the sewer.

As such, the sewer will be afforded protection from construction activities, by the tree protection measures that will 'be retained in their approved form for the duration of the works', as per condition 15 of the planning approval.
