I don't see any potential bat roost features and therefore have no concerns about the roof lights. Biodiversity enhancement will be required. A bat box or swift nest box could be added to the side elevation or a bird box could be added to on a suitable mature tree in the garden. Flowering plants could also enhance biodiversity by providing resources for pollinators.

The following websites provide examples: <https://www.bats.org.uk/our-work/buildings-planning-and-development/bat-boxes>, www.hampshireswifts.co.uk/nesting., and <https://www.rhs.org.uk/science/conservation-biodiversity/wildlife/plants-for-pollinators>.

Please let me know if you need any additional information.

Kind regards,

Lisa
