

T1 - Oak sp. First western lateral bow, to take the first limb back to source; (reason), heavily weighted with small stress fracture with source being the nearest best practice without leaving a large stub. Stem diameter 150mm.

First eastern, over extended lateral to take back to source, (reason), to allow the boundary hedge below to develop; no impact to amenity value, this being a mature tree will alleviate impact of a sudden limb drop as well as allow more enjoyment for light and establish ground flora. Stem diameter 180mm.

The crown lift will allow light into the lower garden and supersede planning application no T/22/93203 crown lift.

First western lateral – view from both sides
