

H/22/93221 – Copper Beeches, Netley Firs Close, Hedge End, SO19 6DX

Ecology Consultation Response

01/08/2022

There is potential for hedgehogs and badgers to be using this area and precautions will need to be taken during construction. Biodiversity enhancements will also be required. Swift nest boxes and bat boxes can be attached to the eaves of the main house. Planting a range of flowering plants to attract pollinators, especially night scented plants to attract moths would be useful. Further information is available on the RHS planting for pollinators website, the Bat Conservation Trust website and the Hampshire Swifts website.
