Conversion of a garage into a single storey en-suite and store extension

Claire Campbell-Best

15/8/22

I have reviewed the photos of the house and garage. There are numerous records of bats in the area but there are no potential bat roost features visible in the photos.

Please could you add the following informative to the decision letter:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be informed. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

Biodiversity enhancement is required. A bat brick could be built into the gable end of the new extension if it would be at least 4 m above the ground, or an externally mounted swift nest box could be added to the gable end of the north-east elevation.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
