

Ecology Response for H/22/93463 38 OAKMOUNT ROAD, CHANDLER'S FORD, EASTLEIGH, SO53 2LH

Two storey side extensions in addition to rear dormer and porch to the front

Dorothy Hei-Tung-Hoh

18/8/22

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be informed. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

Biodiversity enhancement is required. A bat brick or a swift brick built into the new extension might be appropriate. Built in roosts do not require maintenance and cannot fall off.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
