

Ecology response for H/22/93598 56 WALKER GARDENS, HEDGE END, SOUTHAMPTON, SO30 2RL

Single and two storey rear extension

1 September 2022

There are records of bats and swifts within 500 m this site, however the photo of the house on Google maps does not show any potential bat roost features.

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be informed. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

Biodiversity enhancements are required. A built-in bat brick and/or a swift brick would be appropriate in the side elevation of the new addition. Alternatively external boxes could be mounted on the existing side elevations, however built-in boxes do not require maintenance and cannot fall off.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
