

Ecology response for H/22/93467 64 WHALESMEAD ROAD, BISHOPSTOKE, EASTLEIGH, SO50 8HL

Rear/Side Extension. Loft conversion extension with a larger dormer across the rear of the house.
New front porch. A roof window to the front.

Alex Stone

12/9/22

The existing elevations drawings show windows in the rear elevation and right-side elevation of this house, so at least part of the loft is already converted. Photos of the building on Google maps do not show any areas of the building that have obvious potential bat roost features, and although there are records of bats in the area, none are very close to this site.

Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be informed. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

Biodiversity enhancements will be required. This could include a bat brick and/or a swift brick built into the new extension if appropriate.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
