Rebecca,

That repositioning is an improvement and represents a reasonable compromise - but it is just that. The 130mm depth dimension is better than many I have seen and again is reasonable, so holding objection withdrawn.

On the eastern slope ideally the two extra panels would be better fitted to leave an equal margin of exposed roof either side of the rooflights but looking at the drawings this may be compromised by the presence of the small hips of the roof structure.

Again the closer to this objective the better.

Regards,

Tim.
