SO53 1LG

Erection of two-storey rear extension and single storey rear extension

Alex Stone

3/10/22

I have reviewed the photos of the rear of the house and do not see any potential bat roost features in these photos.

Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be informed. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

This proposal involves work that would affect the roof and there are records of bats very close to this property. Please could you send me some close-up photos of the rear of the house and the roof where the extensions would attach to the house?

Biodiversity enhancements are required. A bat box and a swift nest box may be appropriate. Built-in bat and swift bricks are preferable to externally mounted boxes, if possible, as they do not need maintenance and cannot fall off.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
