Single storey side extension, part garage conversion to form habitable space and insertion of bifold doors to rear elevation

Alex Stone

5/10/22

The proposed extension is single storey, and this property is recently built, so is not likely to attract roosting bats. There are records of bats and swifts very close to the property.

Biodiversity enhancement is required. A bat box or a swift nest box mounted on the house would be good enhancements.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. ([https://www.bats.org.uk › our-work › putting-up-your-box](https://www.bats.org.uk/our-work/putting-up-your-box))

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
