I have reviewed the site photos. Since the signs are already in place, and there are already street lights in the car park area, I have no further recommendations.

16/11/22

There are records of bats very close to this application site. The areas of the building where the signs are proposed to be mounted must be checked for potential bat roost features or evidence of nesting birds that could be disturbed when the signs are mounted. The light from the signs must also be considered, however if this area is already brightly lit then the additional light might not be significant. I am happy to review close-up photos of these areas of the building taken in good light to determine whether any further survey might be required.
