

Ecology response for H/22/94269 45 ROOKLEY, NETLEY ABBEY, SOUTHAMPTON, SO31 5PH

Two-storey rear extension. Alterations to fenestrations. New Flue

Claire Campbell-Best

15/12/22

There are records of bats and hedgehogs near this site. I don't see any potential bat roost features on the photo of the house on Google maps.

Please could you add the following informatives to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be informed. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

Any excavations or open pipes will need to be covered at night or provided with a small mammal escape ramp to allow animals such as hedgehogs to escape if they fall in. If hedgehogs are found on site, they must be allowed to move away to safety. If any hedgehogs appear to be in distress, a hedgehog rescue worker should be contacted. Information is available on the website of the British Hedgehog Preservation society at <https://www.britishhedgehogs.org.uk/found-a-hedgehog/>.

Biodiversity enhancements will be required. A bat brick/box on the southeast elevation and a swift brick/box on the northwest elevation may be suitable for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
