

Ecology response for F/22/93670 PEMBERS HILL FARM, MORTIMERS LANE, FAIR OAK, EASTLEIGH, SO50 7EA

Single storey rear extension following removal of existing conservatory, 1no. rear dormer, an integrated double garage and alterations to fenestration

Claire Campbell-Best

5/10/22

I have reviewed the Ecological Impact Assessment by Ecosa (July 2022). This is Plot 1 of the two plots covered by this assessment. The building was assessed as having low bat roost suitability and one emergence survey was conducted. No bats were seen emerging from the building, but six species of bats were seen commuting and foraging across the site. I have no objections to this proposal.

Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be informed. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

Biodiversity enhancements are required. Bat or swift nest boxes may be appropriate.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
