Planning Application for a Plant Compound

Client: Complete Fertility Ltd

Design Statement

This planning application is for the construction of a new mechanical plant enclosure to accommodate 2 Nr chillers and an emergency standby generator to the rear of Hampshire House.

The installation is for use by new tenants of a portion of the upper ground floor. The tenant is an assisted fertility company with a requirement for both climate control and energy security .

Appearance

The design is for an enclosure created by use of diagonal boarding on timber posts over a low brick dwarf wall.

The enclosure will have a set of gates to one side and a small access pathway from the existing fire path.

The construction matches an existing enclosure previously approved (Z/16866/024/00).
