

Ecology response for H/22/94368 36 MORTIMER ROAD, BOTLEY, SOUTHAMPTON, SO30 2EN

Demolition of the existing lean-to room. Two storey side extensions. Alterations to fenestration

Claire Campbell-Best

5/1/23

The proposed extension on the west side of the house would involve works to the roof and the existing hanging tiles on the front and rear elevations. There are several records of bats very close to this site and records of hedgehogs in the area. A preliminary ecological assessment (PEA) is required to include an internal inspection of the loft. The PEA report must also include recommendations for biodiversity enhancements that would be appropriate for this proposal.

Biodiversity enhancements will be required. A bat brick and a swift brick may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. ([https://www.bats.org.uk > our-work > putting-up-your-box](https://www.bats.org.uk/our-work/putting-up-your-box))

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
