

Ecology response for H/23/94605 CRABLECK, HIGH STREET, BURSLEDON, SOUTHAMPTON, SO31 8DJ

Single storey side extension towards the rear and conversion of car port to habitable accommodation

Claire Campbell-Best

20/2/23

There are multiple records of bats very close to this property and great crested newts between this site and the railway line. The photo of the house on Google maps shows hanging tiles on at least one elevation. A preliminary ecological assessment including an internal inspection of the loft spaces will be required. The report must also include recommendations for appropriate biodiversity enhancements and precautionary working methods.
