Trees Consultation Response received 06/04/2023

Upon confirmation that the base for the building is a concrete slab from the Agent

If there are no traditional foundations and the slab was pored over existing ground levels, then that will be less impactful. Ultimately, any detrimental action has already occurred, so we aren't going to get too hung up on this. It is disappointing, but pragmatically we raise no objection to the retention of the structure given that any damage would have already occurred.
