

East Horton Business Park – Protection of public water apparatus

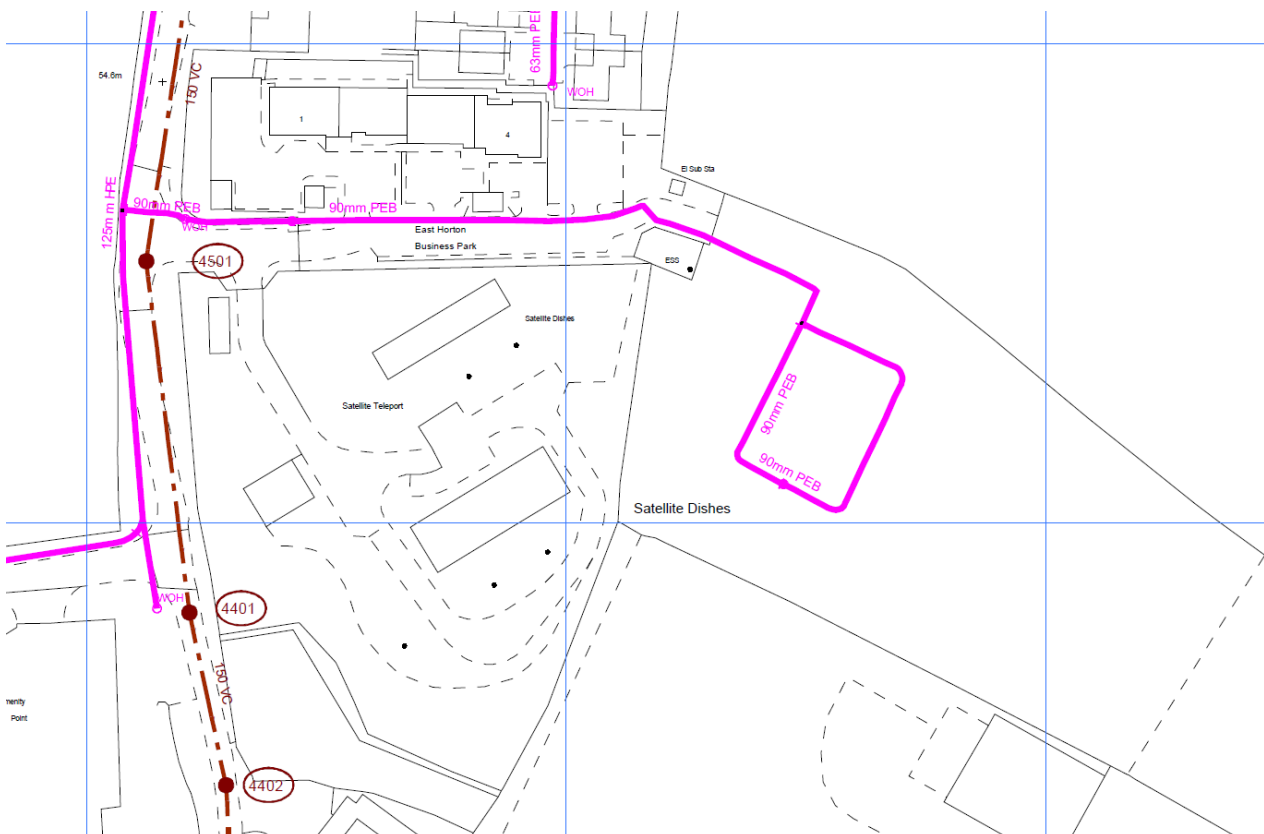

1. Introduction –

The below information sets out the proposed methods for protecting the water main located at East Horton Business Park, Knowle Lane, Fair Oak, SO50 7DZ. As per planning permission F/23/94668.

2. Existing Water Main-

The Existing water main currently extends down from Knowle Lane into the site where it loops around the main court yard area. The development has been designed around the existing utilities which already serve the site and no buildings come within 3m of any existing utilities.

The existing main has already been installed and is located on the edge of the existing tarmac road. Where these areas have already been completed there is very little excavation required other than service connections.

3. Protection Measures

Prior to any excavation on site, the water main will be marked out on site along with the easement zone. Any excavation in this area (new service connections for example) shall be hand dug to ensure no damage is made to the main. The marked out easement and main shall remain marked out until all of the excavation works have been completed.

Full drawings and record information will remain onsite for the site team.
