

Ecology response for H/23/95331 46 LUCK ROAD, BURSLEDON, SOUTHAMPTON, SO31 8LR

Two storey rear extension, single storey front extension and alterations to fenestration

Claire Campbell-Best

24/7/23

Although this building is covered in hanging tiles on the upper storey, it is fairly new and does not appear to have any gaps which could be used by bats. There are records of bats very close to the site and a hedgerow opposite the house which could be used by bats commuting to the woodland to the west of the site. There are also records of hedgehogs nearby.

Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be called. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

As a precautionary working method to protect hedgehogs, all excavations and open pipes must either be covered at night or fitted with a small mammal escape ramp.

It is not clear whether the proposed extension will affect current surface water drainage arrangements. More details must be provided. Is there a soakaway in use, and where is it located?

Biodiversity enhancements will be required. A bat brick and a swift brick may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
