

Ecology response amended for H/23/95413 136 HILTINGBURY ROAD, CHANDLER'S FORD, EASTLEIGH, SO53 5NS

Single storey rear infill extension, raised roof over side extension and part conversion of garage space to habitable accommodation

Alex Stone

2/8/23

I have reviewed the site photos and do not see any potential bat roost features.

Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be called. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

There are records of bats very close to this site and the proposal will involve work to part of the roof. Please could you provide some close-up photos of the roof, soffits, fascia, flashings, and areas around the windows? If possible, some photos taken inside the garage looking up would be helpful also.

Biodiversity enhancements will be required. A bat brick and a swift brick may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. ([https://www.bats.org.uk/our-work > putting-up-your-box](https://www.bats.org.uk/our-work/putting-up-your-box))

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight. (<https://www.swiftconservation.org/Nestboxes%26Attraction.htm>)
