

Ecology response for H/23/95395 GLENROSA, HAMBLE LANE, BURSLEDON, SOUTHAMPTON, SO31 8DR

Loft conversion incorporating 1no. front and 1no. rear dormers and hip to gable roof enlargement.

Claire Campbell-Best

17/7/23

There are records of bats, stag beetles, and hedgehogs very close to this property. I have reviewed the site photos and do not see any potential bat roost features.

Please could you add the following informatives to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be called. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

Any excavations or open pipes will need to be covered at night or provided with a small mammal escape ramp to allow animals such as hedgehogs to escape if they fall in. If hedgehogs are found on site, they must be allowed to move away to safety. If any hedgehogs appear to be in distress, a hedgehog rescue worker should be contacted. Information is available on the website of the British Hedgehog Preservation society at <https://www.britishhedgehogs.org.uk/found-a-hedgehog/>.

Biodiversity enhancements will be required. A swift brick, a sparrow terrace, a hedgehog house, or enhanced planting for pollinators may be appropriate for this application.

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
