Ground floor extension and loft conversion

Dorothy Hei-Tung-Hoh

17/5/23

There are records of bats near this property. There are also records of hedgehogs and stag beetles nearby. The loft conversion will involve works to the roof and existing dormers. The ground floor extension will involve changes to the existing outbuilding and garden.

A Preliminary Ecological Appraisal (PEA), a surface water drainage plan and biodiversity enhancements are required.

A bat brick and a swift brick may be appropriate for this building. The ecological consultant who does the PEA can recommend the best locations for enhancements and what would work well on this site.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
