

Ecology response for H/23/95586 31 FALCON SQUARE, EASTLEIGH, SO50 9JF

Two storey side and single storey rear extension

Clare Martin

29/8/23

There are records of bats, hedgehogs, swifts, grass snakes, common toads, adders and slow worms nearby. This site is on a boundary between amber and green great crested newt impact risk zones. There are also records of otters along the Monks Brook which is located approximately 100 m to the east of this site.

To determine whether any surveys will be required I need to review close up photos taken in good light of the roof, soffits, fascia, flashings, areas around the windows and the garden of the house.

Biodiversity enhancements will be required. A bat brick and a swift brick may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. ([https://www.bats.org.uk > our-work > putting-up-your-box](https://www.bats.org.uk/our-work/putting-up-your-box))

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
