SO53 5DS

ERECTION OF TWO STOREY REAR EXTENSION

Summer Sharpe

11/9/23

There are multiple records of bats, stag beetles and hedgehogs in the immediate area of this property.

The proposed two storey extension will affect the roof and garden. The photo of the house on Google maps (image date March 2023) shows that it is surrounded with scaffolding, so some work may have already been started.

Close up photos of the roof, soffits, fascia, flashings, window frames, the eastern elevation and the garden are needed to determine whether a preliminary bat roost appraisal will be required.

Biodiversity enhancements will be required. A bat brick and a swift brick may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
