

Ecology response for H/23/95750 44 QUEENS VIEW, NETLEY ABBEY, SOUTHAMPTON, SO31 5EA

Proposed loft conversion with rear dormer, two storey side/rear extension and single storey rear extension

Claire Campbell-Best

18/9/23

There are records of bats extremely close to this site and the proposal involves extensive work to the roof. There are also hedgehogs and stag beetles which could be affected by the extensions. A preliminary ecological appraisal is required before determination.

Biodiversity enhancements will be required. A bat brick and a swift brick may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. ([https://www.bats.org.uk > our-work > putting-up-your-box](https://www.bats.org.uk/our-work/putting-up-your-box))

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
