

Ecology response for H/23/95588 HOE MOOR HOUSE, DODWELL LANE, BURSLEDON,
SOUTHAMPTON, SO31 1AB

Proposed single storey side extension and new vehicular entrance gates

Claire Campbell-Best

19/9/23

There are records of bats, great crested newts, dormice, and hedgehogs very close to this site. It is in an amber impact risk zone for great crested newts.

A preliminary ecological appraisal will be required.

Biodiversity enhancements will be required. The most appropriate enhancements can be recommended by the ecological consultant who does the preliminary ecological appraisal.

The following enhancements can be considered:

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. ([https://www.bats.org.uk > our-work > putting-up-your-box](https://www.bats.org.uk/our-work/putting-up-your-box))

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
