Crown lift trees alongside roadways & car parks, prune tree away from streetlight at top entrance.

Pruning to lift tree crowns to 4 meters to improve visibility around car park areas and stooling the 5x goat willows extending over the top car park area, reducing the risks of trees failing and impacting on customers or their property. prune back branches of tree obscuring streetlight at entrance to top car park. Trees will also be reduced away from the roadways on road junctions and on-site roadways and crown lifted to a height of 4 meters around the lower car park containing the vehicle charging units to prevent damage to the vehicles. The team will then reduce the height of the existing shrubs at the main roadway entrance under the totem for a distance of 4 meters to a height of 0.5 meters to further improve visibility.

- Red line shows store boundary and yellow lines indicate the areas of the proposed works

Crown lift silver birch

Reduce shrubs under totem

Goat willows to reduce to stools
