Single storey rear extension following demolition of conservatory and alterations to existing two storey rear extension to change hipped roof to flat roof

Claire Campbell-Best

25/9/23

There are records of bats very near this property and the proposal involves extensive works to the roof. There are also records of nesting swifts in the area.

I need to review photos of the rear elevation to determine whether a preliminary bat roost appraisal is required.

Biodiversity enhancements will be required. A bat brick and a swift brick may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. ([https://www.bats.org.uk > our-work > putting-up-your-box](https://www.bats.org.uk/our-work/putting-up-your-box))

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
