I have reviewed the site photos and no further survey will be required. In the unlikely event that any great crested newts or bats are found on site all work must stop and Natural England must be called.

Any excavations or open pipes will need to be covered at night or provided with a small mammal escape ramp to allow animals such as hedgehogs to escape if they fall in. If hedgehogs are found on site, they must be allowed to move away to safety. If any hedgehogs appear to be in distress, a hedgehog rescue worker should be contacted. Information is available on the website of the British Hedgehog Preservation society at <https://www.britishhedgehogs.org.uk/found-a-hedgehog/>.

This site is within a green great crested newt impact risk zone. There are records of bats and hedgehogs nearby. I need to review close-up photos of any areas of impact on the house and garden to determine whether a survey will be required.

Biodiversity enhancements will be required. A bat brick and a swift brick may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight. (<https://www.swiftconservation.org/Nestboxes%26Attraction.htm>)
