Planning Application –
October 2023

This application has been applied for to construct a front double door entrance into the building.

We have allowed for both steps and full DDA access, via a ramp with rails to allow everyone to enter the building (full existing and proposed plan are attached with this application)

Shrubs and the existing 4 bicycle stands will be installed; therefore, this facility will still be available. The existing doorway will be blocked up using the existing brickwork from the newly formed door opening

This has been installed to the unit adjacent to the building and therefore a precedence has been set.

To the rear of the building, the back yard, where there are existing machinery housed. We wish house additional machinery as per the plan and elevations.

I do hope you can consider our application.
