30/11/23

This property is within an amber impact risk zone for great crested newts, with records of bats, hedgehogs and stag beetles nearby. There are records of nesting swifts in the wider area.

The proposed rear extension and front porch would be on existing hard standing, however the photo of this house on Google maps shows some potential bat roost features on the roof.

A preliminary bat roost appraisal, a precautionary working method for terrestrial great crested newts, stag beetles and hedgehogs, and biodiversity enhancements are required.

The precautionary working method should include all building materials to be stored on hard standing or on pallets, any excavations must be covered at night or be fitted with a small animal escape ramp, and no fires can be lit on site. Any animals found on site should not be handled but be allowed to move away to a place of safety on their own.

A bat brick and a swift brick may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight. (<https://www.swiftconservation.org/Nestboxes%26Attraction.htm> )
