

Ecology response amended for H/23/96496 52 ST JOHNS ROAD, HEDGE END,
SOUTHAMPTON, SO30 4AG

First floor extension

Alex Stone

7/12/23

I have reviewed the site photos. I do not see any potential bat roost features or any potential habitat for stag beetles, hedgehogs, common toads or grass snakes which would be impacted by this proposal.

Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be called. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

This site is within an amber impact risk zone for great crested newts. There are records of bats, stag beetles and hedgehogs very close to the site, with common toads and grass snakes in the wider area.

This proposal will impact the rear (West) elevation and the roof so close up photos taken in good light are required to determine whether a survey will be needed.

Biodiversity enhancements will be required. A bat brick and a swift brick may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
