

Ecology response for H/23/96508 THE PASTURES, PYLANDS LANE, BURSLEDON,
SOUTHAMPTON, SO31 1BH

Two storey side and rear extension and front porch

Claire Campbell-Best

21/12/23

This site is on the boundary between red and amber great crested newt impact risk zones. There are records of bats nearby with common reptiles in the wider area.

I need to review close up photos of any areas of the house and garden, roof and chimney which might be impacted by the proposals to determine whether any surveys will be required.

Biodiversity enhancements will be required. A bat brick and a swift brick may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. ([https://www.bats.org.uk > our-work > putting-up-your-box](https://www.bats.org.uk/our-work/putting-up-your-box))

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
