

Ecology response for H/23/96501 20A OAKWOOD ROAD, CHANDLER'S FORD, EASTLEIGH, SO53 1LX

Replacement hipped roofs to front dormer windows and erection of front canopy porch

Claire Campbell-Best

21/12/23

This site is in a green impact risk zone for great crested newts. There are records of bats very close to the site and records of common toads and swifts in the vicinity.

To determine whether a survey is required, I need to review close-up photos of any areas which will be affected by the proposals.

Biodiversity enhancements will be required. A bat brick and a swift brick may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. ([https://www.bats.org.uk › our-work › putting-up-your-box](https://www.bats.org.uk/our-work/putting-up-your-box))

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
