

CHAPTER 7: AIR QUALITY – ADDENDUM

Introduction

A series of minor changes have been made to the One Horton Heath project as a result of the ongoing consultation on the Wider OPA and OPA Phase 1 planning applications.

The proposed changes have been reviewed to determine whether the findings set out in the submitted ES Air Quality chapter remain valid.

Revised Proposals – Wider OPA

Following the submission of the outline planning application for One Horton Heath (O/20/89498) in December 2020, a number of changes have been made to the Proposed Development as a result of ongoing consultation.

The revised EIA parameters do not result in changes that would alter the assessment of potential effects, and the conclusions reached in Chapter 7: Air Quality of the original ES. Accordingly, no additional technical assessment is required.

Revised Proposals – OPA Phase 1

Following the submission of the full planning application for One Horton Heath First Residential Parcel (F/20/89500) in December 2020, a number of minor changes have been made to the proposed development as a result of ongoing consultation.

The revised EIA parameters do not result in changes that would alter the assessment of potential effects, and the conclusions reached in Chapter 7: Air Quality of the original ES. Accordingly, no additional technical assessment is required.

Post-submission Consultation Response

A number of technical comments and queries were received from EBC's Pollution Control department on the original ES Air Quality Chapter. A detailed response was prepared by Hydrock (Document Reference C-09820-C_OHH_Response_AQ) which is appended to this Air Quality ES Addendum note (Appendix A).
