Installation of air source heat pump

Gina Aftanas

10/3/26

There are records of bats and hedgehogs near this site. I have reviewed the aerial photo of the site on Google maps and do not see any potential habitat for hedgehogs in the garden. It is not likely that the heat pump in this location on the ground outside the house will affect bats.

No objection.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF (December 2024) paragraphs 187d and 192 b. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
