

Ecology response for H/26/101058 LOWER LAPSTONE, BOTLEY ROAD, FAIR OAK, EASTLEIGH, SO50 7AN

Proposed Single Storey Extension

Gina Aftanas

24/3/26

This site is in an amber impact risk zone for great crested newts. There is a watercourse along the southern boundary of the property which flows into Quobleigh Pond. There are records of great crested newts and grass snakes in habitat that is functionally connected to this site. There are also records of bats nearby.

Photos are required of the side elevation of the house and any areas of the garden that would be impacted by the proposal. What is the distance to the nearby watercourse and how is it separated from this property?

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF (December 2024) paragraphs 187d and 192 b. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. ([https://www.bats.org.uk > our-work > putting-up-your-box](https://www.bats.org.uk/our-work/putting-up-your-box))

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight. (<https://www.swiftconservation.org/Nestboxes%26Attraction.htm>)
