

Ecology response for H/26/101063 5 FOREST ROAD, CHANDLER'S FORD, EASTLEIGH, SO53 1NA

Single storey rear/side extension, garage conversion and pitched roofs to existing dormers

Alexandra Stone

28/3/26

There are records of bats and hedgehogs near this site. The photos of the site that are available on Google maps (July 2025 image capture) show several potential bat roost features on the front elevation which would be affected by the proposals. There may be additional features on the rear and side elevations which are not visible in the photo.

It is necessary to determine whether there is also suitable habitat for hedgehogs and nesting birds that would be affected by these proposals. I can review photos to determine this, but a preliminary bat roost appraisal will still be required.

As the bat emergence survey season is May through August only and emergence surveys may be needed before determination, any delays in arranging a preliminary survey may result in missing the bat emergence survey window.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF (December 2024) paragraphs 187d and 192 b. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
