

Ecology response for H/26/101099 12 GRANADA ROAD, HEDGE END, SOUTHAMPTON, SO30 4AN

Proposed new dormers to front elevation, rooflights to rear elevation and a single storey rear extension

Gina Aftanas

30/3/26

This site is in an amber impact risk zone for great crested newts.

There are records of bats nearby and hedgehogs in the wider area.

I have reviewed the photos of the house available on Google maps and do not see any obvious potential bat roost features.

Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be informed. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

I don't see any habitat for great crested newts or hedgehogs in the area impacted by the proposed rear extension.

Any vegetation to be removed to facilitate the development must be removed outside of bird nesting season (which is usually between the beginning of March and the end of August). If this is not possible then vegetation can be cleared only after being checked for nesting birds by a suitably qualified ecologist up to 24 hours before the start of works. If any active nests are found, work must stop, and a 5 m buffer must be erected around the nest to protect it from disturbance until after the birds have fledged and left the nest.

A precautionary working method must be used to prevent harm to wildlife that could be using this site. It should include:

All building materials to be stored on hard standing or on pallets, as far as possible from hedgerows, scrub or potential habitat.

Any excavations must be covered at night or be fitted with a small animal escape ramp

No fires can be lit on site.

Waste must be stored in a skip and not be allowed to accumulate in piles which could be used by wildlife. Any chemicals and fuels must be stored carefully and away from potential wildlife habitat.

Any animals found on site should not be handled but be allowed to move away to a place of safety on their own.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF (December 2024) paragraphs 187d and 192 b. A bat box and or a bird nest box such as a sparrow terrace may be appropriate for this building. The garden can be enhanced with plants for pollinators.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west.
