

Ecology response 31 3 26 for F/25/100284 6 SEDGWICK ROAD, BISHOPSTOKE,
EASTLEIGH, SO50 6FB

Proposed erection of 1 x detached 3-bedroom bungalow

Dorothy Hei-Tung-Hoh

31/3/26

I have reviewed the amended proposed site layout. The information requested in the previous ecology response (8/12/25) is still required.

This includes:

- Informatives with precautionary working methods for nesting birds, small mammals and reptiles and amphibians.
- Hedgehog holes in the baseboards of any new closed board fencing,
- Specifications for exterior lighting
- Precautions during removal of invasive non-native plant species
- Ecological enhancements to be shown on an elevation plan and a landscaping plan and agreed before determination
- Details of the permeable paving and soft landscaping

The amended site layout may provide more opportunities for 10% biodiversity net gain to be achieved on site.

The **EBC Biodiversity Net Gain Strategy form must be completed and submitted before determination** as specified in the local validation list. This must provide information about the source of credits/units proposed to be purchased to meet biodiversity net gain obligations.

Pre-and post-development habitat plans must be submitted with the BNG Strategy form.
