

Ecology response 15 4 2026 for H/26/100979 5 ROMAN CLOSE, CHANDLER'S FORD,
EASTLEIGH, SO53 2AW

2 storey side and single storey rear extensions

Alexandra Stone

15/4/26

Ecology

I have reviewed the site photos. I don't see any obvious bat roost features, however there is suitable habitat for hedgehogs and nesting birds in the garden. A bat box/brick should be built into the south facing elevation and a swift nest box should be built into the north facing elevation. If these elevations are not suitable, the east and west elevations can be considered. Built-in roost features are preferable to externally mounted boxes as they do not need maintenance and cannot fall off.

Please could you add the following informatives to the decision notice:

- In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be informed. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.
- Any vegetation to be removed to facilitate the development must be removed outside of bird nesting season (which is usually between the beginning of March and the end of August). If this is not possible then vegetation can be cleared only after being checked for nesting birds by a suitably qualified ecologist up to 24 hours before the start of works. If any active nests are found, work must stop, and a 5 m buffer must be erected around the nest to protect it from disturbance until after the birds have fledged and left the nest.
- A precautionary working method must be used to prevent harm to wildlife such as hedgehogs that could be using this site. It should include:

All building materials to be stored on hard standing or on pallets, as far as possible from hedgerows, scrub or potential habitat.

Any excavations must be covered at night or be fitted with a small animal escape ramp

No fires can be lit on site.

Waste must be stored in a skip and not be allowed to accumulate in piles which could be used by wildlife. Any chemicals and fuels must be stored carefully and away from potential wildlife habitat.

Any animals found on site should not be handled but be allowed to move away to a place of safety on their own.

Surface water drainage

Due to the size of the proposed extensions, a surface water drainage plan is required before determination.

6/3/26

There are records of bats and hedgehogs near this site

To determine whether any surveys will be required I need to review close up photos taken in good light of all areas of the roof, fascia, soffits (standing next to building and looking upwards), flashings, hanging tiles, the elevations to be affected by the proposal and any potential gaps or openings.

Photos of the garage (interior ceiling and exterior roof) any areas of the garden affected by the proposal are also required.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF (December 2024) paragraphs 187d and 192 b. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. ([https://www.bats.org.uk > our-work > putting-up-your-box](https://www.bats.org.uk/our-work/putting-up-your-box))

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
