

Ecology response 27 4 26 for H/26/101222 78 ST JOHNS ROAD, HEDGE END,
SOUTHAMPTON, SO30 4DF

Proposed rear single-storey extension, infilling of the existing side carport, and extension of the current first-floor balcony, together with associated fenestration modifications.

Gina Aftanas

27/4/26

I have reviewed the site photos and do not see any obvious potential habitat features.

Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be informed. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

Biodiversity enhancements as described in the previous response should be agreed before determination or can be conditioned.

21/4/26

There are records of bats, badgers and hedgehogs near this site. I don't think any potential bat roost features would be affected by these proposals, but I would like to review photos of the rear of the building after the site visit planned for 24 April 2026.

A precautionary working method for hedgehogs will be required.

All building materials to be stored on hard standing or on pallets, as far as possible from hedgerows, scrub or potential habitat.

Any excavations must be covered at night or be fitted with a small animal escape ramp

No fires can be lit on site.

Waste must be stored in a skip and not be allowed to accumulate in piles which could be used by wildlife. Any chemicals and fuels must be stored carefully and away from potential wildlife habitat.

Any animals found on site should not be handled but be allowed to move away to a place of safety on their own.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF (December 2024) paragraphs 187d and 192 b. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. ([https://www.bats.org.uk > our-work > putting-up-your-box](https://www.bats.org.uk/our-work/putting-up-your-box))

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
