

Ecology response for H/26/101204 77 BURSLEDON ROAD, HEDGE END, SOUTHAMPTON, SO30 0BU

Proposed side and rear extension with pitched roof and 3x skylights.

Charlie Vallis

3/5/26

There are records of bats near this site and hedgehogs in the wider area.

I don't see any potential bat roost features in the photos submitted with the application, however there is a hedgerow along the northern property boundary which could provide habitat for nesting birds, hedgehogs and foraging and commuting bats. There is an existing corrugated metal garage next to the hedgerow which would need to be removed to enable construction of the extension.

A precautionary working method must be used to prevent harm to wildlife such as hedgehogs and nesting birds that could be using this site. It should include:

Any vegetation to be removed to facilitate the development must be removed outside of bird nesting season (which is usually between the beginning of March and the end of August). If this is not possible then vegetation can be cleared only after being checked for nesting birds by a suitably qualified ecologist up to 24 hours before the start of works. If any active nests are found, work must stop, and a 5 m buffer must be erected around the nest to protect it from disturbance until after the birds have fledged and left the nest.

All building materials to be stored on hard standing or on pallets, as far as possible from hedgerows, scrub or potential habitat.

Any excavations must be covered at night or be fitted with a small animal escape ramp.

No fires can be lit on site.

Waste must be stored in a skip and not be allowed to accumulate in piles which could be used by wildlife. Any chemicals and fuels must be stored carefully and away from potential wildlife habitat.

Any animals found on site should not be handled but be allowed to move away to a place of safety on their own.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF (December 2024) paragraphs 187d and 192 b. A bat box and a swift nest box (on the main house) may be appropriate for this building. An elevation drawing should be annotated with proposed locations.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the

sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
