

Ecology response for H/26/101253 9 ALEXANDRA WAY, BOTLEY, SOUTHAMPTON, SO30 2ED

Single-storey rear extension following the demolition of existing conservatory

Gina Aftanas

4/5/26

No objection

There are records of bats, slow worms, and hedgehogs very close to this site.

I have looked at the photo of the rear of the house in the proposed plans and do not see any potential habitat for these species that would be affected by this proposal.

Please could you add the following **informatives** to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be informed. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

A **precautionary working method** must be used to prevent harm to wildlife that could be using this site. It should include:

Any piles of rubble and soil must be dismantled by hand to avoid harm to any animals which could be sheltering within the rubble.

All building materials to be stored on hard standing or on pallets, as far as possible from hedgerows, scrub or potential habitat.

Any excavations must be covered at night or be fitted with a small animal escape ramp

No fires can be lit on site.

Waste must be stored in a skip and not be allowed to accumulate in piles which could be used by wildlife. Any chemicals and fuels must be stored carefully and away from potential wildlife habitat.

Any animals found on site should not be handled but be allowed to move away to a place of safety on their own.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF (December 2024) paragraphs 187d and 192 b. A bat box and a swift nest box may be appropriate for this building and can be located on the gable ends if they are the correct orientations. This is not clear from the proposed elevation drawing, which is only labelled front, left, right and rear rather than N, S, W and E.

An elevation drawing showing the locations of these features must be submitted and approved. This can be conditioned or agreed before determination.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the

sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
