

Ecology response 14 5 26 for H/26/101078 136 FAIR OAK ROAD, BISHOPSTOKE, EASTLEIGH, SO50 8LP

Demolition of existing single storey rear extensions, addition of single storey rear extension.

Alexandra Stone

14/5/26

I have reviewed the site photos. There are two lifted boards on the side of the existing conservatory, however a conservatory is usually not suitable for bats due to changes in temperature and high light levels. The rest of the extensions do not have any obvious bat roost features and are surrounded by existing hard standing.

Please could you add the following informative to the decision notice:

In the unlikely event of any bats being found during demolition or construction, all work must stop immediately, and Natural England must be informed. Additional information is available on the Bat Conservation Trust website at <https://www.bats.org.uk/advice/im-working-on-a-building-with-bats/ive-found-a-bat-during-works>.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF (December 2024) paragraphs 187d and 192 b. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight. (<https://www.swiftconservation.org/Nestboxes%26Attraction.htm>)
