

Ecology response 20 5 26 for H/26/101324 4 WEST HORTON LANE, BISHOPSTOKE,
EASTLEIGH, SO50 8LR

Erection of a two-storey rear extension and removal and rebuilding of a garage at rear with flat roof.

Katie Lasham

20/5/26

I have reviewed the site photos. There are numerous potential bat roost features (PRFs) on the house and the garage. A preliminary bat roost appraisal is required before determination as the presence of protected species is a material consideration.

Photos of the garden have not been provided. A precautionary working method must be used to prevent harm to wildlife that could be using this site. It should include:

All building materials to be stored on hard standing or on pallets, as far as possible from hedgerows, scrub or potential habitat.

Any excavations must be covered at night or be fitted with a small animal escape ramp

No fires can be lit on site.

Waste must be stored in a skip and not be allowed to accumulate in piles which could be used by wildlife. Any chemicals and fuels must be stored carefully and away from potential wildlife habitat.

Any animals found on site should not be handled but be allowed to move away to a place of safety on their own.

There are records of bats very close to this site with hedgehogs and nesting swifts in the wider area.

To determine whether any surveys will be required I need to review close up photos taken in good light of all areas of the roof, fascia, soffits (standing next to building and looking upwards), flashings, hanging tiles, the elevations to be affected by the proposal and any potential gaps or openings.

Photos of the existing garage roof (exterior and interior) and any areas of the garden affected by the proposal are also required.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF (December 2024) paragraphs 187d and 192 b. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. ([https://www.bats.org.uk/our-work > putting-up-your-box](https://www.bats.org.uk/our-work/putting-up-your-box))

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
