

Ecology response for F/26/101113 BOTLEY MILLS, MILL HILL, BOTLEY

Installation of replacement roof sheeting and solar PV panels

David Huckfield

20/5/26

There are records of bats very close to this site, with potential for nesting birds to be affected by the works. I have reviewed the photos provided in the Design and Access Statement but it is not clear whether these photos cover all areas that would be impacted by the works.

Although the roof is asbestos sheeting without gaps, and the windows allow a lot of light into the rooms, there may be crevices in the supporting structure under the roof where bats could roost and areas that would be affected by the scaffolding required to do this work.

A preliminary bat roost appraisal will be required.

Biodiversity enhancements will be required in accord with Local Plan policy DM 11 and NPPF (December 2024) paragraphs 187d and 192 b. A bat box and a swift nest box may be appropriate for this building.

The Bat Conservation Trust recommends installing a bat brick/box at least 4 m above the ground, away from artificial light sources, sheltered from strong winds and exposed to the sun for part of the day, facing south, south-east or south-west. (<https://www.bats.org.uk/our-work/putting-up-your-box>)

Swift nest boxes are best positioned under the eaves or on walls facing north, northeast or north-west out of direct sunlight, five metres above the ground, with clear adjacent airspace so swifts can access them in a high-speed direct flight.
